
RetroMAD1®

WORLD'S FIRST BIO-SYNTHEZIZED IMMUNE MODULATORY SUPPLEMENT
FOR PETS

Saving lives by applying recent advancement in genomics and proteomics on infectious
diseases that have no cure today

RetroMAD1® Our Advocates

RetroMAD1 is the therapeutic of choice to relief FeLV, FIV and FIPV infected cats from their symptoms so that they and their owners can live happy and fruitful lives together. Biovalence Technologies is actively seeking partners to register and reach out to cat owners and shelters around the world who are in need to find a cure against these fatal feline diseases. Here are some feedbacks from cat owners and shelters who regularly use RetroMAD1 to treat their cats.

Feline Leukemia (FeLV) and Feline Immunodeficiency Syndrome (FIV)

“These cats were diagnosed FeLV+ and FIV+ on different dates between about one and three years ago. To prevent other cats in the sanctuary from being infected the FeLV+ cats were immediately taken out of the enclosure and brought down to live in my office and in my house where all my own cats have been vaccinated against the virus. As I said, they have now been on RetroMAD1 for 10 months, before that some of them were on an immune booster called Birm – a plant extract that comes from Ecuador. I was told about Birm by a young lady living in Ecuador in early 2017 - she has been giving it to her cat which survives to this day in reasonably good health. I discontinued Birm both because I was having problems obtaining it, but also because one of the cats on it suddenly deteriorated and died, although I have an idea that he may have been suffering from something else in addition to FeLV. I tried everything to save him, including a blood transfusion, but it was all in vain. Mark was such a special boy – our vet Adele said that he was the sweetest and most gentle cat that she ever had in her hospital. The fact that all the above cats are alive, eating well (except for Bobby, which is understandable in view of his deficient kidneys) and enjoying life shows that RetroMAD1 is highly effective.” – **Mr. John B., owner of a cat shelter in Johannesburg, South Africa (Mar 2019)**

“RetroMAD1 is what has helped my FIV/FeLV+ male cat [to] keep going. He was at the shelter for 2 years and was exposed to 7 or 8 cats with FeLV then. He now eats well and has good energy level... I am very grateful for the shipment of RetroMAD1! Having changed the dosage to your recommendations I am seeing more dramatic results. I know Dr. Melissa B. who is the lead veterinary researcher at IDEXX. IDEXX company is about 1 hour from my shelter. Dr. B. spoke at my conference on FeLV in 2016. She has been a great supporter of our shelter. At that time, I told the conference attendees about RetroMAD1. Dr. B. today read an article on line from todayonline.com/Singapore about RetroMAD1 and Biovalence developing a specific Covid-19 treatment.” – **Mr. Dana R., owner of a cat shelter in Maine, USA (Mar 2020)**

“RetroMAD1 works on even the most extreme cases that veterinarians would deem hopeless. There is no doubt in my mind after reading all the blood work results and witnessing the amazing physical transformation in my cat’s health, RetroMAD1 is the safest, most effective treatment for retroviruses currently available anywhere in the world.” – **James S., owner of a female cat suffering from FeLV & FIV, U.S.A. (Dec 2018)**

“Hello Dr. Chua. Ashton is feeling really good! Energy and his appetite has increased since being on RetroMAD1 however, his viral load is still very high based on the saliva tests (please see attached tests results). I'm not certain if I should be concerned or not since clearly he feels better. I can't help but wonder if RetroMAD1 might work on the Covid-19 virus? I'm sure you all have already pondered this and probably tried it. My next question is because of this virus and if so, should I order more now or wait? I have a full box which should last me a little over 6 weeks” – **Shannon H., owner of a male cat suffering from FeLV, U.S.A. (2020)**

“Dear Alfred. Thank you very much for taking the time to answer my questions. Your patience and comprehension are much appreciated. I will plan attentively when to start the treatment as Ulysse has to have a blood test after 20 days which is Holiday time, etc. and I have to order more RetroMAD1. I should sort this out this week. Congratulations about the publication approval of RetroMAD1 for the treatment of FeLV in a science journal! From my side of caregiver, I just thank you for trying and giving us hope.” – **Patrizia S., owner of a male cat suffering from FeLV, Canada (Jan 2020)**

“There is clear improvement across the board when compared to her last test. Ronya is much more active, her anemia has ceased as far as we can tell, her appearance is much improved. We are extremely grateful that RetroMAD1 was available because we are sure that it has been responsible for improving her situation.” – **Eva C., owner of a female cat suffering from FIV, Spain (Jul 2018)**

“I just had Hope tested and am forwarding the results to you. I've included the viral load from 2018 as well for comparing. Over all everything looks good. In June 2017, the FIV viral load in her blood was high at 147,000 unit. In July 2020 [after 90 days of using RetroMAD1 daily as prescribed], the FIV viral load in her blood has dropped 100 times to 6,510 units.” – **Mimi L., owner of a female cat suffering from FIV, Denmark (Jul 2020)**

“I had a lot of good results with retromad in cat FIV treatment... Thank you very much and I look forward to hearing from you!” – **Dr Alina M., veterinarian, Romania (Sep 2020)**

Feline Infectious Peritonitis

“Hi Alfred,

- Thor – male street cat rescued by Caren Soares
- Estimate Age at FIP diagnosis – (10 months)
- Start date of RetroMAD1 treatment – (November 2013)
- End date of RetroMAD1 treatment – (January 2015)
- Survival post FIP diagnosis – (426 days or 14 months)”

Caren S., owner of a male cat suffering from FIP, Brazil (Aug 2019)

“He is getting so much better and since last week I let him play & eat with other cat and can see he have so much appetite. Not sure if i did a right decision by letting him with other cats but I think he is much better in appetite compared to put him in one room alone. He keeps on moving in the house. So much better.” – **Amalina A., owner of a male cat suffering from FIP, Malaysia (Aug 2020)**

“Extremely pleased with the early results on the 2 of my 11 cats I'm using RetroMAD1 on. A rescue I volunteer for just had a 2 year old cat just diagnosed with FIP. I've started that cat on RetroMAD1. As I mentioned in my email last week, I started treating a rescued cat with RetroMAD1 for FIP. He was 3.3kg and has been getting 1ml, three

times a day, for the last 8 days. Weight gain to 3.6kg, eating great, has good bladder and bowel movements, and has been active for the last 5 days.” – **Philip M., owner of a female cat suffering from FIP, U.S.A. (Sep 2020)**

The screenshot shows the AnimalCare website with a blog post titled "Fresh supply of RetroMAD1 for Zurik". The post is dated Monday, May 13th, 2019, 5:23 pm. The author is chankahyein. The post content includes: "Yesterday was one month after Zurik's diagnosis of having FIP. At present, he seems to be doing as well as he can be on the following; Prednisolone 2.5mg twice daily RetroMAD1 0.8ml thrice daily Vetri DMG 0.5ml daily B Complex Fish oil I had to buy a new stock of RetroMAD1 today as whatever I [...] Category: Home, Medical | Comments are closed". Below this is another post titled "Zurik gets an inside view and more about RetroMAD1" dated Sunday, April 21st, 2019, 10:28 am. The author is Heidi. The post content includes: "Heidi: I haven't been out for taji for SO long!! Ginger: I haven't been out to chase Buddy and Lanky for SO long too!! Zurik: I'm quite settled in the house. Not going out. But I do miss having Heidi or Zurik accompany me for taji. Zurik acts as a [...] Category: Home, Medical | 2 comments - (Comments are closed)". A third post is titled "Zurik starts on RetroMAD1" dated Friday, April 19th, 2019, 9:59 pm. The author is chankahyein. The post content includes: "Last night, Zurik started on RetroMAD1, the anti-viral that was experimental many years ago. It was my friend, Agnes, who reminded me that RetroMAD1 might be worth a try, so I contacted my friend, [...] Category: Home, Medical | 1 comment - (Comments are closed)". On the right side of the page, there is a sidebar with a search bar containing "RETROMAD1 ZURIK", a table titled "No of Animals Helped" with the following data: Neutering: 10793, Medical/Vaccination: 2345, e-Relicensing: 1175, TOTAL: 14313, Education, Food, etc.: Many animals, and many more..., a "What we do" section with a video player, and a "Donate" section with local bank information (Public Bank Bhd 3168194929, AnimalCare Society Petaling Selangor) and a "Donate" button.

Feline Panleukopenia

“...I believe in your product. I think for example that parvo virus which cause panleukopenia [in cats] made same mutations in the last 2 years. This year all 24 kittens rescued from the street was sick with panleukopenia, despite the fact that they were vaccinated with 1 or 2 vaccines. 6 of the kittens died at the vet despite the fact that they received all necessary treatments. After this I've received from a friend half of the bottle of RetroMAD1 and all remaining 18 kittens was cured, only 3 need perfusions at vet with vitamins and antibiotics. I really believe in your product.” – **Ms Madalina B., owner of cat rescue-shelter, Romania (Aug 2020).**
